Winter Trap-Neuter-Return Guidelines

When is it too cold to safely and humanely trap-neuter-return community cats during the winter months?

We can take away some of the guesswork for you with our new

[T/N/R conditions indicator](#) located in the bottom right corner of the IHA website homepage.

You can also refer to the new [winter T/N/R guidelines](#) for more information by clicking on the indicator.

During December and January fewer litters of kittens are being born.

However, once February comes around, their heat cycles will kick into full gear and kitten season will begin all over again!

You can still work to control community cat populations during the winter months by following some safe practice guidelines.

Trap-Neuter-Return A Growing Movement!

We are very excited to see many Iowa communities recognizing trap-neuter-return as the most effective and humane solution for controlling community cat populations!

All of the following municipalities are either in the process of considering or have already adopted a T/N/R policy for controlling their community cat populations:

Des Moines, Iowa City, North Liberty, Boone County, Winterset, Wellman, Hiawatha, Vinton, Washington and Waterloo

This is fantastic news for cats, shelters/rescues and Iowa communities!

2019 is going to be a great year for T/N/R in Iowa!

Stay tuned to our [website](#), [Facebook Page](#) and [IHA newsletters](#) for more information about upcoming T/N/R Workshops and other exciting news, events and programs through Iowa Humane Alliance!

Together we can make life better for the animals we all care for!
